

AEROINSIGHT

VISUALIZING AVIATION DATA

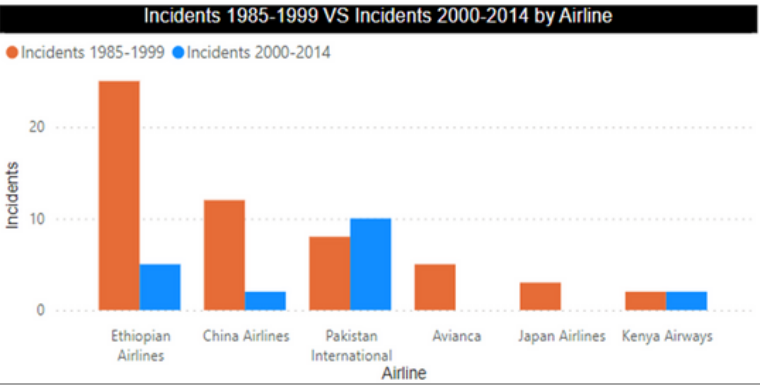

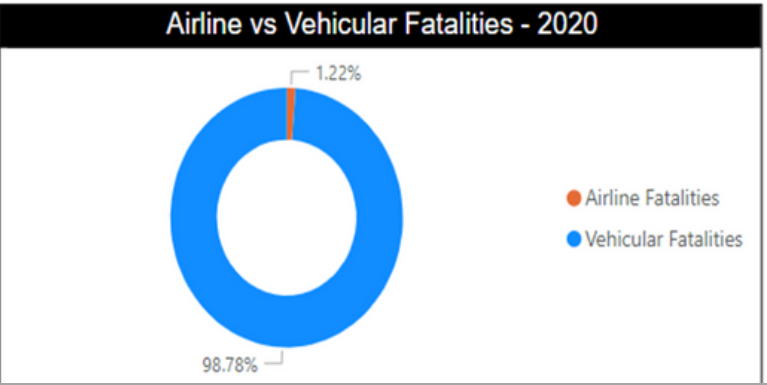

Visualizing aviation data to uncover facts, trends, and insights within the industry

In 2014, global airlines logged a record-breaking 33 million flights, underscoring the continuous improvement in air travel safety worldwide. While there are periodic variations, the consistent downtrend underscores the impact of enhanced safety protocols and technologies, especially in economically and technologically advanced nations. Additionally, the concentration of safety incidents tends to be higher in regions with dense air traffic and complex airspace configurations, highlighting areas where further safety measures could be targeted.

AIRBORNE SAFETY: FEWER FATALITIES, GREATER PEACE OF MIND

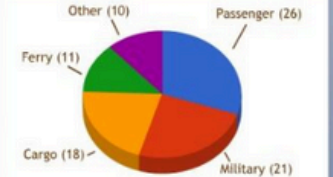

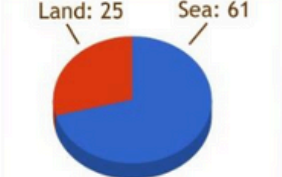

FROM MISSING TO MANAGED : AIR SAFETY STRIDES 1984 - 2014

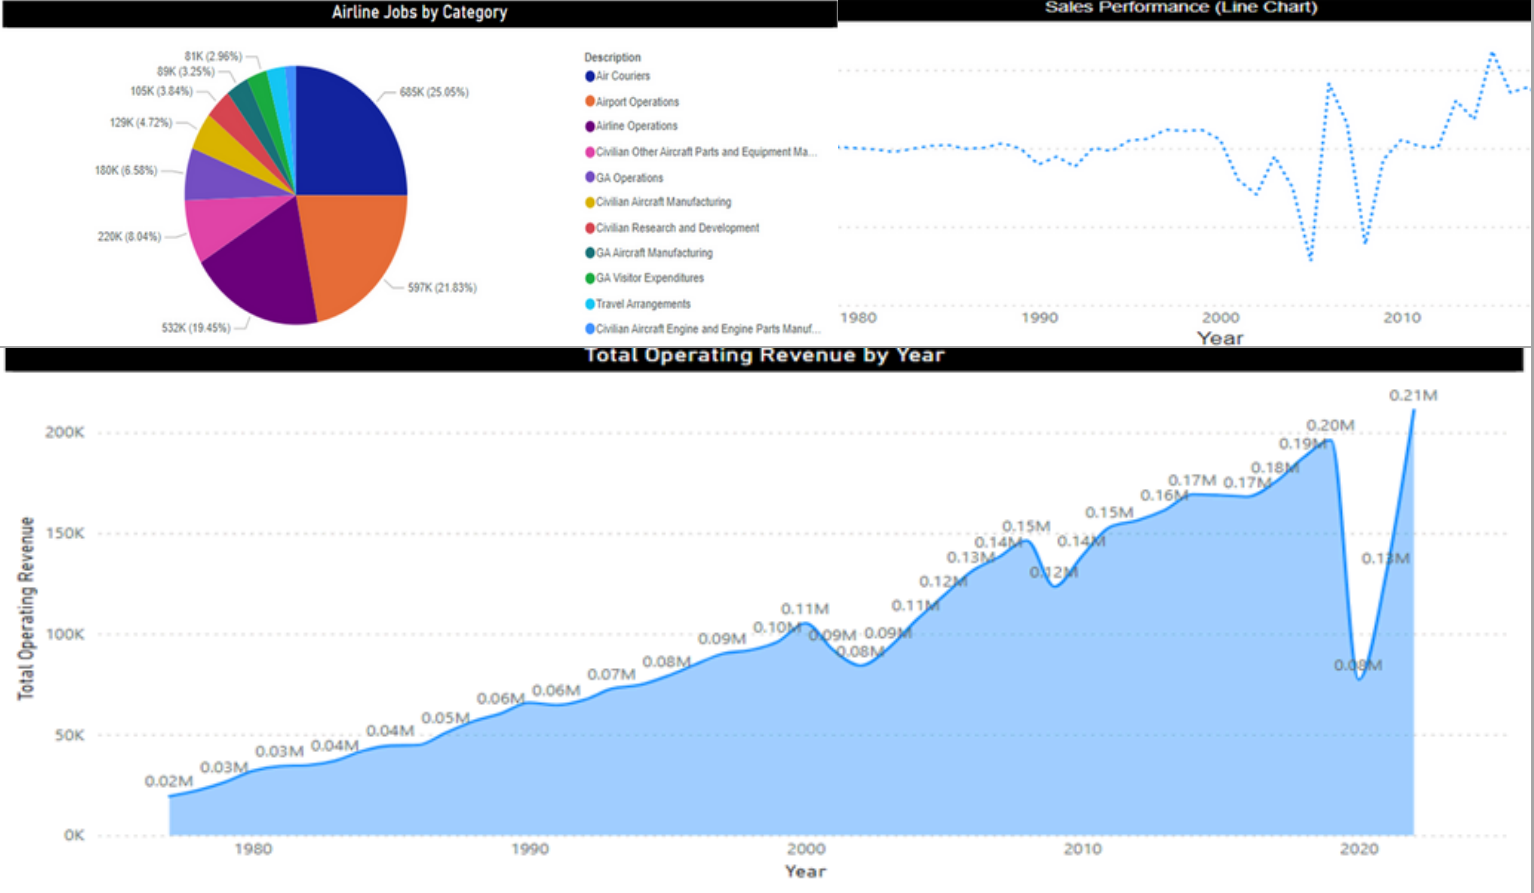

86 missing aircraft

Passenger and cargo aircraft
Military transport aircraft
Corporate jets
missing without a trace

AIRLINE - ECONOMIC IMPACT
